

```
root@localhost: arth_ws
[root@localhost arth_ws]# python3  linserver.py

Enter Linux Server IP: 192.168.43.79 Receiver IP

Enter Linux Port: 1234 With this Port

Enter Windows Server IP: 192.168.43.251 Sendind to this IP

Enter Widows Port: 6789 Having this Port

Enter msg you want to send: Hi... Win!!
Sended msg: Hi... Win!!

Enter msg you want to send:

Received msg: Hii... Lin!!!

Received msg: How are you doing?

I am doing well
Sended msg: I am doing well

Enter msg you want to send: And You?
Sended msg: And You?

Enter msg you want to send:
```

```
Command Prompt - python  winserver.py
D:\ML_ArthWorkSpace>python  winserver.py

Enter Linux Server IP: 192.168.43.79 Sending to this IP from Win

Enter Linux Port: 1234 Having this Port

Enter Windows Server IP: 192.168.43.251 Receiver IP Here

Enter Widows Port: 6789 With this Port

Enter msg you want to send:

Received msg: Hi... Win!!

Hii... Lin!!!
Sended msg: Hii... Lin!!!

Enter msg you want to send: How are you doing?
Sended msg: How are you doing?

Enter msg you want to send:

Received msg: I am doing well

Received msg: And You?
```

```
[root@localhost ~]# netstat -unlp | grep 1234
```

Linux commad to see live UDP port active

```
